

Coronavirus

LBS are delighted to be the preferred supplier of the Medi-Mark Scientific range of surface disinfectants to the industry.

Coronavirus belongs to the family of Coronaviridae viruses. These fall under the Group IV (Baltimore Classification) positive sense single strand RNA viruses.

We can comfortably state that CHEMGENE HLD4, TRIONIC, AIRGENE and INVIRTU are all effective against Coronavirus on the following basis:

- INVIRTU alcohol-free hand foam sanitiser is effective against all enveloped viruses, including strains of Coronavirus within 30 seconds.
- TRIONIC RTU TESTED to be effective against Coronavirus
- CHEMGENE HLD4 has been tested against other Group IV positive sense single strand RNA viruses under the EN14476 test protocol (such as Caliciviridae), but also Vaccinia Virus the standard reference organism for enveloped viruses. Therefore it is reasonable to infer efficacy against Coronavirus using CHEMGENE HLD4 and ANIGENE HLD4 according to the test results achieved.
- AIRGENE effective in 15 minutes.

TRUSTED INFECTION CONTROL
