

Electro Gel

Certain animal and protocol conditions create a requirement for “special dietary needs” products to ensure animals’ survival and to encourage reliable research outcomes

Bio-Serv was the first to create a product to meet these special needs in 2003, with the introduction of Nutra-Gel – a highly palatable, nutritionally complete food and water gelled diet

This has now been expanded to include a water gel and an electrolyte gel

These products can be easily fed to animals, by placing the cup or pouch at cage level. This allows the animal to remain healthy and hydrated even through impaired conditions

Electro Gel is an oral electrolyte hydration gel that is available in a strawberry flavour, packed with vitamins and minerals to promote recovery.

- | | | | |
|---|--|---|---|
|  | Gelled, oral electrolyte hydration supplement |  | Economical and easy to use requiring no refrigeration or special storage |
|  | Balanced electrolyte and glucose levels energy to provide energy, nutrients & hydration to aid recovery |  | Highly palatable with a sweet, salty strawberry flavor |
|  | Comparable to Pedialyte and PRANG in gel form |  | Suitable for a variety of research species |
|  | Thermo reversible: Medications can be added for stress-free oral dosing |  | Gamma Irradiated |

Pyramid Feeder

This well designed stable feeder is ideal for use with critical care diets and specifically with the Pure-WaterGel, ElectroGel and NutraGel products

- ✓ **Certified (Contaminant Screened)**
- **Made of durable pure virgin nylon**
- ✗ **Use with any powdered, liquid, soft or gelled diet**
- ✚ **Provides easy access to critical care diets for sick or debilitated animals**
- ✓ **Autoclavable and cagewasher safe**

All Gels can be warmed up and it will turn back to a liquid, you can then add any medication or drugs to it, and it will reset back to a gel!
