

## New Gelled Products

### A Clear Path to Wellness with Innovative Gelled Diets

We are pleased to introduce this new and extensive line of products, available exclusively from LBS. This range is focused on animal health. Certain animal and protocol conditions create a requirement for "special needs" products to ensure animals' survival and to encourage reliable research outcomes. Bio-Serv was the first to create a product to meet these special needs in 2003, with the introduction of Nutra-Gel—a highly palatable, nutritionally complete food and water gelled diet. This has now been expanded to include a water Gel and an electrolyte Gel. These products can be easily fed to animals, by placing the cup or pouch at cage level. This allows the animal to remain healthy and hydrated even through impaired conditions.

#### Pure Water Gel™ Total Hydration

Pure-Water Gel is a clear gelled water source that can be used as a complete water replacement or supplement for mobility impaired research animals.

#### ElectroGel™ Electrolyte Replenisher

Electro-Gel is an oral electrolyte hydration gel that is available in orange or strawberry flavours and is packed with vitamins and minerals to promote recovery.

#### NutraGel™ Complete Nutrition

Nutra-Gel is our tried and true bacon flavoured gelled diet, based on the AIN-93G formulation and serves as a complete food and water source for rodents.
